Natural Shades from the Portfolio Collection add the beauty of nature to your interior. The fabrics in this collection feature light, delicate weaves that create a soft, diffused glow.

Incorporating the beauty of nature in interior spaces is a timeless design goal. Natural Shades are woven by hand with materials like jute, flax, and cotton. They are meticulously crafted by skilled artisans into finished products that bring the tranquility of the outdoors into your home. Finished shades retain the warm hues of their raw materials, enhancing the ambient feel of your space.

PATTERN SELECTION

The Materials Reference table provides useful technical information about the materials you should use. Coordinated edge binding colors are also listed for each pattern.

The fabrics in this collection are made from natural materials, which are subject to the same wear and tear as any natural product, fabrics may show natural color changes over time.

Natural fabrics are not ideal for rooms with excessive humidity like bathroom or kitchen, as they may twist over time.

SHADE STYLES

Standard and Waterfall styles are available. Both styles rise in folds when the shade is raised.

STANDARD SHADES

Has a 6" valance on the front of the shade.

Valances are lined with Room-Darkening liner material to conceal the head rail components. Unlined shades will have lined valances coordinated to the shade material. Light-filtering lined shades will have lined valances coordinated to the liner material.

WATERFALL SHADES

Has no front valance. The shade comes off the front of the head rail in a flat panel.

Available with back valances, which can be ordered in either the shade fabric or the liner fabric for lined shades. Back valances conceal the shade components from the back of the shade.

Available with interior valances. Interior valances come standard with waterfall shades that are unlined or that are ordered with a light-filtering liner. Interior valances block the outline of the shade components from showing on the front of the shade. Valances are 4" long and are made with coordinated liner material. *Because the valance is made with Room-Darkening fabric, the part of the shade in front of the interior valance will look darker than the rest of the shade when light is coming through.*

BOTTOM BARS

Clutch and motorized shades will be made with a flat sewn-in bottom bar. If hold down brackets are requested, a round bottom bar will be used.

Call for current pricing
(609) 742-1720

CONTROL OPTI

CORDLESS SHADES

Cordless shades are raised by pushing up on the hem bar and lowered by pulling down on the hem bar. A spring control system located under the wooden head rail holds the shade in place at the desired position.

Clear grips are added to the hem bar of cordless shades; one per shade up to 72" wide and two for wider shades.

Cordless shades are available up to 96" wide and 96" long and will be mounted on a 1½" deep head rail (see Specifications for details).

CLEAR GRIP

Call for current pricing
(609) 742-1720

TOP-DOWN BOTTOM-UP SHADES (TDBU)

Raised from the bottom or lowered from the top.

To conceal shade components, shades will be finished with a Room-Darke lined front valance and a back valance. Back valance will match shade material for unlined shades or liner material for lined shades.

TDBU shades are not available in waterfall style, as 3-on-1 head rail, or as shades. Only available with cordless control.

TDBU shades can be raised and lowered by hand. A Top Bar Grip is included on all shades and ships unattached for optional installation. This grip can be paired with a Lift Assist pole to raise and lower the top bar for shades installed in tall windows.

Note: Inside Mount TDBU shades are not available to be ordered with returns. For installations where returns are required for inside mount TDBU, follow the recommendation below:

Order shades as outside mount with returns. Shades should

CLUTCH CONTROLS

Clutches provide an assisted lift for large or heavy shades and come standard with a nickel-plated bead chain loop.

Compliant cord tensioners are provided with clutch control shades. Cord tensioners secure the cord loop to the wall or window. They must be installed for the shade to be compliant with safety regulations and to operate properly.

Standard shades ordered with a clutch come “clutch adjacent” to keep the stack of the raised shade from interfering with the loop. This means the shade fabric will be narrower than the ordered width on the control side, allowing the cord to hang to the side of the shade (see diagram). This may cause a light gap on room-darkening shades.

Waterfall shades ordered with clutch controls will have control loops behind the shade and are not available to be ordered as clutch adjacent.

Call for current pricing
(609) 742-1720

CONTROL OPTI

PRO WAND SHADES

Pro Wand shades are powered by a rechargeable battery motor and are operated by pressing the buttons on the wand handle, which hangs to the side of the shade.

Pro Wand is a good alternative to cordless when the window or shade size makes it hard to raise or lower the shade.

USB-C charging port for the motor battery is located on bottom of the Pro Wand handle.

Wand is only available in White.

4 available wand lengths: 24", 36", 48", and 60".

Motorized shades are mounted on a deeper head rail (see Specifications for details).

Shade fabric will be made narrower than the ordered width on the control side, allowing the wand to hang on the side of the shade. This may cause a light gap on Room-Darkening shades.

Not available to be ordered with waterfall shade styles or for shades with a movable liner.

EDGE BINDING

Edge bindings are available as a no charge option.

Edge bindings will be sewn down both sides of the shade and valance and not applied to the bottom of either.

All edge bindings will be approximately ½" wide on the face of the shade.

Some patterns are required to be ordered with edge binding, as noted in the Materials Reference table. Patterns that require edge binding will have the warranty for frayed edges voided if ordered without it.

EDGE SEAL

Edge Seal is used only on select fabrics when ordered without edge binding. See the Binding Required column of the Materials Reference table.

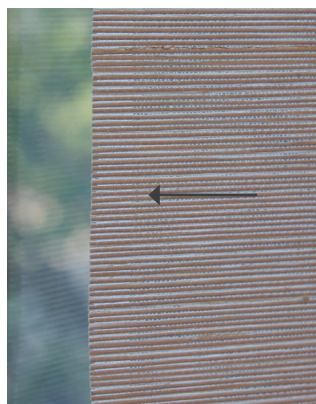

Edge Seal is a non-adhesive tape applied to the back left and right edges of the shade from fraying. It is also applied to the valance of standard shades.

Edge Seal is transparent once applied, but it may be slightly visible from the front if the shade is unlined. It will be more visible on darker fabrics than on lighter fabrics.

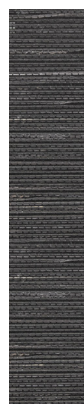

Call for current pricing

VALANCE RETURNS

Valance returns attach to the sides of the head rail and cover shade components can be made with the shade material or with edge binding material.

All valance returns will be made with an L-shaped connector which attaches in place, creating a clean, finished corner.

Outside mount shades are recommended to be ordered with valance returns. Valance returns are available free of charge if requested at the time the order is placed.

Standard height will be 1 1/2" less than the valance height, keeping the roller hidden behind the return. Short valance returns are also available. They cover the end of the head rail and the stack of the raised shade away from the returns.

Standard (*IB and OB shades*) and Extended (*OB shades only*) depth returns are made to the depth of the head rail. Extended depth returns are made 1/2" deeper than the wall and the back of the return.

See chart below for return specification details or diagrams on page 18.

TWIN SHADES

Twin shades are shades with a separate, operable liner and two sets of cor
the shade in front and one for the liner shade behind. Controls are recomr
on the same side of the shade.

Controls can also be a mix of cordless, clutch, and remote motorization. Co
the liner shade will always be positioned behind the front shade.

Outside mount twin shades will be made with a valance that is $\frac{1}{2}$ " wider t
ordered shade width. This will allow the returns to fit behind the valance.

Twin shades have deeper head rails to accommodate the dual sets of cont

MULTIPLE SHADES ON ONE HEAD RAIL

Shades are available with 2-on-1 or 3-on-1 head rail. The maximum total width is 112" and the gap between shades will be no more than ½". The maximum width for a common valance is 96"; wider valances will be made in sections to match the individual shade widths.

Cordless, clutches, and motorization (wand or remote) can be used for these shades. Make sure there are suitable locations for chain tensioners when specifying multiple shades on one head rail. 3-on-1 head rail is not available for top-down bottom-up shades or twin shades.

CUT OUTS

Cut outs can be taken from either side of the shade. Exact dimensions and

There may be limitations to what can be cut out, based upon the size and all orders for cut outs, and you will be contacted if there is a production co

Not available with edge binding.

SLIDING PANELS

Sliding Panels are fabricated using the Absolute Panel system by Coulisse.

Sliding panels provide a clean, contemporary look for large windows and doors. The panels are suspended from aluminum hangers, which glide smoothly on an aluminum track and pass in front or behind the window.

Panels can be pulled open and closed with a clear acrylic wand. Panels are available in a variety of materials and colors. The number of panels is determined by the width of the window.

OPENING OPTIONS

ONE-WAY

When open, panels stack to either the right or left. *Specify on the order to which side the panels will stack.*

The standard configuration is for the back panel to be stationary and all the other panels to be sliding. Free-floating panels are also available.

CENTER OPENING (SPLIT DRAW)

Must be made with an even number of panels. Panels stack to both sides.

Standard configuration is the back panel on both sides to be stationary and the center panel to be sliding. A center opening can also be requested on a 2 channel track, which allows a center panel to be stationary. See Configurations on page 28.

Reverse stacking and free-floating panels are also available.

NOTE: If you want the panels to stack completely away from the window, specify a 2 channel track. See Specifications for more details.

Call for current pricing
(609) 742-1720

SLIDING PANEL INSTALLATION

TRACK INSTALLATION

Tracks are installed using either a top mount or face mount bracket. Both bracket options have a flange which is inserted under the lip of the track and a tab which the track snaps into to hold the sliding panel track in place.

Tracks and brackets are available in white or silver.

PANEL INSTALLATION

Panels are suspended by a Velcro top rail, which slots into the track runners. See Panel Installation on page 27 for illustration.

VELCRO TOP RAIL AND RUNNER

BOTTOM BAR

Sliding panels will be finished with a flat, fabric wrapped bottom bar.

Call for current pricing
(609) 742-1720

SLIDING PANEL BOX

VALANCE BOARD

Sliding panels can be ordered with a valance board, which installs above the panel track. 8" valances attach to the board.

Valances can be installed either direct mount if top mounting or using an L when face mounting. Sliding panel tracks will be installed to the underside valance board.

Valance boards will be matched to the color of the fabric used for the sliding panel.

When ordered inside mount, valances will attach to the front of the valance board only with no returns. When ordered outside mount, valances will include extra fabric to cover the front and sides of the valance to create a clean corner.

Valances will have fabric railroaded.

The height of the sliding panel is measured from the top of the valance board to the bottom of the sliding panel. The valance board is 3/4" thick, and the fabric must account for all required deductions.

The depth of the valance board is based on the number of tracks the sliding panel will have. See chart below.

VALANCE BOARD DEPTH

	2 CHANNEL	3 CHANNEL	4 CHANNEL	5 CHANNEL

PANEL SIZE CALCULATIONS

Sliding panels are ordered slightly wider than required to include a 2 1/2" panel overlap allowing for privacy. Reference the table above for panel widths of select track sizes based on the configuration.

To calculate an approximate panel width, multiply the gaps between your panels (the number of panels ordered minus 1) by 2 1/2" (the panel overlap). Add this number to the overall width of your panel track. Then divide that number by the number of panels ordered.

For example: For a 96" one-way panel track, each panel will be approximately 25 7/8" wide.

NATURAL DRAPERIES

NATURAL DRAPERIES

Natural Draperies present a sophisticated and stylish way to cover large windows. The Natural Drapery will include decorative track with your choice of round or square valances are not needed for this product.

Natural material is railroaded to hang vertically when ordered in this style. Four sides to protect the edges and is included in the price of the drape.

Natural draperies are constructed using wave tape. Hooks attach to carrier maintaining their structure when being opened and closed.

Check the Materials Reference table for patterns that are available to be made.

OPENING OPTIONS

ONE-WAY

Drapery is one continuous panel that stacks to either the right or left. Specified drapery will stack.

CENTER OPENING (SPLIT DRAW)

Drapery is two panels, which open in the middle and stack to either side.

NOTE: If you want the panels to stack completely away from the window frame, specify the width in the overall width of the shade. See Specifications for more details.
